

Amit - Sr. Node Js Developer

Experience: 5.5+ Years

Education: BE (IT)

Synopsis

- Over 5.5 years of IT industry experience as a Senior Node.js Developer, specializing in designing, developing, and maintaining complex web applications.
- Proficient in Core PHP, leveraging its capabilities to build robust and scalable back-end angular systems.
- Extensive experience with Angular for developing dynamic and responsive front-end applications.
- Expertise in Node.js, particularly in serverless computing using AWS Lambda, to create efficient and scalable server-side applications.
- Proficient in database management systems such as MySQL, MongoDB, and PostgreSQL, ensuring optimal performance and data integrity.
- Skilled in developing and integrating RESTful web services (JSON), enhancing application interoperability and performance.
- Strong front-end development capabilities using HTML, CSS, JavaScript, jQuery, and AJAX, ensuring responsive and dynamic user interfaces.
- In-depth knowledge of MVC architecture and OOPs principles, promoting clean, modular, and maintainable code.
- Experienced with project management tools such as Jira and ClickUp, facilitating efficient task tracking and project collaboration.
- Proficient in version control systems, including SVN and GIT, ensuring effective source code management and team collaboration.
- Demonstrated ability to work effectively in both independent and collaborative environments, delivering high-quality software solutions on time.

Technical Skills

Technologies	Core PHP, Angular, Node Js Serverless lambda
Databases	MYSQL, MongoDB, PostgreSQL
Web Technologies	Rest full Web Service (JSON), HTML, CSS, JavaScript, jQuery, AJAX.
Architecture Concepts	MVC, OOPs
Project Management	Jira, Clickup
Source Control Tools	SVN, GIT

Key Skills

- An aspiring software engineer with skill sets in computer programming using HTML, CSS, Bootstrap, and JavaScript.
- Hands-on experience in Coding, Testing, and Implementation/Maintenance support in PHP and MySQL.
- Quick learner and eager to learn new technologies.
- HTML coding, PHP, core JAVA, JavaScript, MySQL.

Recent Projects

1. Project Name: Semicolon

Role: Backend developer

Description: Semicolon is a robust social media management platform that enables businesses to monitor and streamline interactions across various profiles using a unified Social Inbox. The project involves implementing separate inboxes for platforms like Facebook, Instagram, LinkedIn, (X) Twitter, TikTok, and Google Business, allowing users to manage and respond to communications seamlessly. With real-time monitoring and customizable workflow features, Semicolon enhances collaboration, organizes messages efficiently, and integrates analytics for performance tracking, providing businesses with an efficient, centralized approach to managing their social media presence.

Technologies: NodeJs(Typescript), ReactJS, MongoDB, PostgreSQL

Duration: 5 Months

2. Project Name: CWS

Role: Backend developer

Description: CWS is a global online freelancing platform that serves as a meeting ground for clients and freelancers worldwide. Businesses and individuals can post job opportunities or projects on the platform, and freelancers have the opportunity to submit bids based on their skills, expertise, and desired rates. Upon the awarding of a project, the CWS platform becomes a collaborative space where freelancers and clients work together to complete the tasks. CWS also facilitates payment processing, contributing to a seamless working relationship between clients and freelancers.

Technologies: Express.js, NodeJs, AWS lambda, PostgreSQL

Duration: 11 Months

3. **Project Name:** Broadband Harmony Initiatives

Role: Mean Stack developer

Description: It's an admin panel based on the client's specific requirement for broadband and network-related things. The main thing of the admin panel is private, only the user can log in, which is created by the admin. For this application, we are managing four types of roles.

- Super Admin
- Partner
- Organization
- User

Responsibilities:

- We are managing login things for every role. In this project, we have used multitenancy functionality (a Partner can create a parent organization, and a parent organization can create a level of child organization and child user).
- We have used Google Chrome and chart services in the frontend.
- We have used Redis, and BullMQ services in the backend.

Technologies: MongoDB, Express, Angular, Node

Duration: 10 Months

4. **Project Name:** Ark Travels

Role: Frontend and Backend Developer

Description: It's a mobile application where users can find any trip for a particular city, and also he/she can create their own trip. The application can be managed from the admin panel. I created an admin panel and backend logic for this project. This project used the Google API for getting place details, the distance between places, and direction-wise route optimization

Technologies: MySQL, Express JS, Angular, NodeJs, IOS, Android

Duration: 8 Months

5. Project Name: ZillerGrund**Role:** Frontend Developer**Description:**

- ZillerGrund is a web portal where users can get tips for hotels, rooms, and food and also get tips for travelling packages with hotels at the best price per member.
- My role is to work on the admin panel.
- I learned strapi basics for admin panel work.

Technologies: MySQL, Express Js, Angular, NodeJs**Duration:** 6 Months**6. Project Name:** In Geding**Role:** Front-end development and testing.**Description:** It's a web application like LinkedIn where users can post/apply for jobs, check candidates/company profiles, and contact them via this portal. I worked on frontend**Technologies:** MySQL, Express Js, Angular, NodeJs**Duration:** 11 Months**7. Project Name:** BUOYD**Description:** BUOYED is a lifecycle and health-focused platform that addresses life expectancy by encouraging users to do a self-analysis of any existing clinical symptoms that they might have.**Technologies:** MySQL, Express Js, Angular, NodeJs**Role:** Front-end development and testing.**Duration:** 7 Months**8. Project Name:** Code Review Portal**Role:** Front-end development and testing.**Description:** This project was a kind of portal where senior developers can update the code audit report of junior developers.**Technologies:** Laravel, MySQL**Duration:** 7 Months
