

Kinjal - Sr Flutter Developer

Experience: 9+ Years

Education: B.E.

Synopsis

- Over 9 years of experience in Flutter development and Android development.
- Proficient in building responsive and visually appealing user interfaces leveraging Flutter widgets and Material Design principles.
- Experienced in developing cross-platform Android/iOS/Windows/Web-based apps using the Flutter framework.
- Experienced development skills like Flutter, Dart, BLoC, Provider, Android, Java, JSON, XML, REST API integration, app localization, third-party SDK integration, In-App purchase integration, gRPC, third-party payment like Stripe, Paytm and Razorpay, Firebase services, such as FCM, database, authentication integration for enhancing app functionality.
- Extensive experience in development tools like VS Code, Android Studio, Android SDK, ADB, Gradle, Xcode, Postman, Google Play Console, Firebase Console, Keystore signing for efficient development, debugging, testing and deployment.
- Experienced in integrating local and cloud databases such as SQL and Firebase to create data-driven applications.
- Expertise in using version control systems like GitHub, and BitBucket for collaborative development and code management.
- Proficient in developing native Android applications using the Android platform.
- Strong problem-solving and debugging, ensuring the delivery of high-quality, bug-free apps.
- Collaborative team player experienced in agile development methodologies, sprint planning, and peer code reviews.
- Passionate about staying updated with the latest trends and advancements in Flutter development to deliver cutting-edge solutions.

Technical Skills

Programming Skills	Flutter, Dart, Android, Java
Tools	Visual Studio Code, Android Studio, XCode, Postman, Trello, Jira
Version System	Github, BitBucket

Operating System	MacOS, Windows, Linux
Other Skills	SQL, REST API integration, app localization, XMPP, FCM, gRPC, third-party SDK integration, In-App purchase integration, third-party payment like Stripe, Flutter Web & Desktop, Paytm and Razorpay integration

Recent Projects

1. Project Name: AL Munasiq

Description: Dubai Customs' AL Munasiq app facilitates users to classify their goods opinions by using AI-based techniques and to check on customs-related information. Users can use product images (through camera/selection in case of already available pictures) or by entering simple textual descriptions to get customs-related details.

Roles and Responsibilities:

- Senior Flutter app developer
- Involved in the full life cycle of the project including analysis design, development, debugging, testing, and deployment.
- App Testing
- Deployment on the app store, test flight, and Play store

Technology: Flutter, Dart, Push notification, REST API

2. Project Name: EduSync – Live Learning Platform

Description: EduSync is a mobile-first virtual classroom mobile and web app where students can attend live classes, access recorded lectures, and interact with teachers. gRPC enables real-time bi-directional communication between the frontend app and backend services for live Q&A, chat, and streaming classroom events.

Roles and Responsibilities:

- Senior Flutter app developer
- Involved in the full life cycle of the project including analysis design, development, debugging, testing, and deployment.
- Deployment on the app store, test flight, and Play store

Technology: Flutter, Dart, Flutter Web, Push notification, gRPC

3. Project Name: Voltello

Description: Households connected to the Voltello App (powered by Village Energy) can add and control devices in their home, like air conditioning, pool pumps, rooftop solar and more. You can see device consumption, keep track of energy spending and subscribe to new smart energy plans.

The App can be connected to a customer's energy utility where Village Energy is working with them to offer their customers new ways to save money and earn rewards.

Roles and Responsibilities:

- Senior Flutter app developer
- Involved in the full life cycle of the project including analysis design, development, debugging, testing, and deployment.
- App Testing
- Deployment on the app store, test flight, and Play store

Technology: Flutter, Dart, Push notification, REST API

4. Project Name: MedConnect - Telemedicine App

Description: MedConnect is a cross-platform telemedicine app that connects patients with doctors for real-time video consultations, medical advice, and follow-ups. The app uses gRPC to enable fast and reliable communication between the mobile frontend and backend services like appointment scheduling, video session handling, and patient medical records.

Roles and Responsibilities:

- Senior Flutter app developer
- Involved in the full life cycle of the project including analysis design, development, debugging, testing, and deployment.
- App Testing
- Deployment on the app store, test flight, and Play store

Technology: Flutter, Dart, Push notification, gRPC

5. Project Name: Mobile App for Heritage Sites

Description: The app is designed to provide an enriching experience of monuments/heritage sites of Gujarat to tourists/general public and promotion of Gujarat tourism sites on mobile.

Roles and Responsibilities:

- Senior Flutter app developer
- Mobile app UI/UX development
- Involved in the full life cycle of the project including analysis design, development, debugging, testing, and deployment.
- Deployment on the app store, test flight, and Play store

Technologies: Flutter, Dart, Push notification, REST API

6. Project Name: Now Push app

Description: Seamlessly connecting your devices as one, on any device, on any operating system, on your phone, your tablet, your Mac, your PC, or just in your Web browser. Share Anything, Copy/Paste Cross-Platform, Set Reminders Send text, links, and files seamlessly between any device. Copy and

Paste between any device. Set quick and easy reminders. Private and Public RSS Feeds: Create and follow public or private RSS feeds with Threads. Now Push is a secure platform with FULL "End to End Encryption" for all messages and files by default, with no exceptions.

Roles and Responsibilities:

- Flutter app developer
- Involved in the full life cycle of the project including analysis design, development, debugging, testing, and deployment.
- App Testing
- Deployment on the app store, test flight, and Play store

Technologies: Flutter, Dart, Flutter Web, Push notification, REST API

7. Project Name: Dating App

Description: This is an exciting concept where you can meet people who share the same interests, hobbies, ideas, concepts, events, and more. Enter the circle, upload a story, or watch stories of others in the same circle, join an unlimited number of circles.

Roles and Responsibilities:

- Android app developer
- Mobile app UI/UX development
- REST API integration
- App Testing
- Deployment on Play store

Technologies: Android, Java, Push notification, REST API

8. Project Name: Food Ordering application

Description: Using the App, you can order food & beverages online from restaurants near & around you. We deliver food from your neighbourhood local joints, your favourite cafes, luxurious & elite restaurants in your area, and also from chains like many well-known hotels.

Roles and Responsibilities:

- Flutter app developer
- Mobile app UI/UX development
- REST API integration
- App Testing
- Deployment on the app store, test flight, and Play store

Technologies: Flutter, Dart, Push notification, REST API, Payment integration

9. Project Name: Location-based application

Description: Made Android Application for converting your conventional addresses to digital addresses. Using this application users can create their digital address. they can create private(e.g.

Home), Public (e.g. Offices, Parks), and Events (e.g. Party Seminars) locations, after that, they get one unique link for their address and they can use that link anywhere like on visiting cards, on invitations, etc. we also provide a search functionality where users can search locations using unique ids, random keywords like (foods, cafe, offices, etc.). Users can see popular, nearby locations in their cities.

Roles and Responsibilities:

- Android app developer
- Mobile app UI/UX development
- REST API integration
- App Testing
- Deployment on Play store

Technologies: Android, Java, Push notification, REST API

10. Project Name: E-commerce application

Description: The application is for a business that sells all kinds of handicraft products. This includes a product list, wishlist, upcoming product advertisement, and global search. The payment gateway like Paytm and Razorpay were integrated for payment.

Roles and Responsibilities:

- Android app developer
- Mobile app UI/UX development
- REST API integration
- App Testing

Technologies: Android, Java, Push notification, REST API, Payment integration

11. Project Name: Chat application

Description: Made Flutter app for a chat in which we can share Text messages, and all kinds of files like images, audio, and video files. A major part of this app is where we use Socket for connections and share details.

Roles and Responsibilities:

- Flutter app developer
- Mobile app UI/UX development
- REST API integration
- App Testing
- Deployment on the app store, test flight, and Play store

Technologies: Flutter, Dart, Push notification, REST API

12. Project Name: Inventory management application

Description: Android app for managing inventory of products with a barcode scan. Admin will know using notification also that which product is out of stock. The admin can get details of products by scanning the barcodes of products including adding products and managing product lists.

Roles and Responsibilities:

- Android app developer
- Mobile app UI/UX development
- REST API integration
- App Testing

Technologies: Android, Java, Push notification, REST API
