Recent Project

1. **Project Name:** Wobble
   Role: Backend Developer
   Description: Wobble is a taxi booking application designed to provide users with an easy way to book rides through an intuitive interface. The platform connects drivers and riders while managing various features such as real-time booking updates, payment processing, and communication through SMS and email.

Responsibilities: API Management, Admin panel designing and development, Payment Gateway integration, SMS gateway integration, code versioning management, cron job for booking updates, email management for bookings, server setup and code deployment
Technology: PHP, Laravel, Mysql
Duration: 2 Months

2. **Project Name:** Nayku
   Role: Backend Developer
   Description: Experience transformative online coaching, personalized video sessions with expert astrologers, and legal advice—all at your fingertips. Discover a world of guidance, no matter where you are.
   Responsibilities: API Management, Admin panel designing and development, Payment Gateway integration, SMS gateway integration, code versioning management, cron job for booking updates, email management for bookings, server setup and code deployment
   Technology: Laravel, Socket, PHP, MySQL, AWS EC2
   Duration: 2 Months

3. **Project Name:** Jale App
   Role: Backend Laravel Developer
   Description: Job Portal
   Responsibilities: Creating APIs, Integrating Google map APIs, and Chat functionality.
   Technology: Laravel
   Duration: 1 Month

4. **Project Name:** Sunset Row
   Role: Backend Laravel Developer
   Description: eCommerce Website and Mobile Application
   Responsibilities: APIs created, Admin panel management, Frontend Development, Database management, Server Deployment
   Technology: Laravel
   Duration: 2 Months

5. **Project Name:** TCT
   Role: Backend Developer
   Description: Trucking services
   Responsibilities: Resolved socket-based issues in the server, new features added in the admin panel, and API issues for the mobile app.
   Technologies: PHP-Laravel

Duration: 1 Month

6. **Project Name:** Zing
   Role: Backend Laravel Developer
   Description: Dating app
   Responsibilities: Creating and updating APIs and admin panel issues, Admin panel new features adding, API issues resolving.
   Technologies: Laravel 5
   Duration: 3 Months

7. **Project Name:** Airsyne   mobile app
   Role: Backend Laravel Developer
   Description: It's a message sharing in the air.
   Responsibilities: Creating and managing APIs and admin panel
   Technologies: Laravel
   Duration: 2 Months

8. **Project Name:** MYCARRY
   Role: Laravel Developer
   Description: Its transport goods service backend panel. In this, two types of users: customers and drivers. It's a mobile app backend panel where customers post their transportation requests and drivers check their posts bid on their posts and complete their transport from origin and destination.
