## Recent Project

---

### 1. **Project Name:** Nayku

**Role:** Developed UI for admin panel and website and also made API for mobile application.

**Description:** This project aims to create an online platform for services like tutoring, legal help, medical advice, religious services, and astrology guidance.

**Responsibilities:** As a Backend Developer, my responsibilities included backend management tasks such as creating APIs with Swagger documentation, designing and maintaining the database schema, and ensuring smooth operation of the system.

**Technology:** PHP, MySQL, HTML, CSS, Agora, Stripe, Socket.IO, Laravel PHP

**Duration:** 8 Months

### 2. **Project Name:** CWS - CRM Portal

**Role:** Backend Developer

**Description:** Sass Base CRM, built on Laravel, is a comprehensive solution for managing customer relationships. It seamlessly integrates leads management, enabling efficient tracking and conversion. With features for creating and managing proposals and handling payments, including one-time and recurring payments, it simplifies the invoicing process. Additionally, its project and task management functionalities facilitate organized project planning and execution, ensuring teams stay on track and deliver results efficiently.

**Responsibilities:** As a Backend Developer, my responsibilities included backend management tasks such as creating APIs with Swagger documentation, designing and maintaining the database schema, and ensuring smooth operation of the system.

**Technology:** The project utilized Vue.js for frontend development, PHP for backend logic, Laravel framework for server-side operations, and MySQL for data storage.

**Duration:** 2 Years

### 3. **Project Name:** TaskForge

**Role:** Backend Developer

**Description:** The project involves developing a client CRM portal, focused on lead generation and proposal creation. Clients can approve proposals and make payments, triggering the creation of invoices. The system also includes functionality to generate projects and manage tasks based on approved proposals.

**Technologies:** Laravel PHP, MySQL, Git, HTML/CSS, Javascript, jQuery, Stripe API, Banquest API, Quickbooks API, InvoiceNinja API, ClickUp API, Swagger API, MySQL

**Duration:** 2 Years
